MATH

$$\begin{array}{r} + 53 \\ 8 \overline{) 8} \end{array}$$

$$9 \times 9 = 81$$

COMMODORE
64

NO EXPANSION NEEDED
JOYSTICK NOT REQUIRED

EDUCATIONAL
SOFTWARE

ADD IT Large number addition with graphics. First select single, double or triple digit wide addition problems at prompt. Fifteen problems are presented, wrong answers are graphically led to the right answer. Performance summerization after the last problem.

MATH IQ When prompted, select difficulty level and type(s) of problems desired. You are then given two minutes in which to advance your "Smartness Scale" with as many correct answers as possible. Correct answers are given for wrong responses.

MATHMAN Enter your name when prompted then select level (1) Math Terms, (2) Math Equations, or (3) Math Tools. Fill in the blanks (missing letters or numbers) before MATHMAN falls into the boiling acid.

TOYSTORE You are given a dollar to spend at the TOYSTORE. Graphic toys appear with their price. If you want to buy the toy, you must first figure how much change you will have left. How many toys can you buy with your dollar?

CYBORG RAIDERS Blast the RAIDERS in your viewport by correctly answering multiplication problems and pressing the "A" key. Five misses and you're doomed - twenty correct answers get you to the Space Station. Performance summerized.

HOPSKOTCH MATH Two players take turns hopping numbers from island to island. Points (treasure) obtained by entering answer - number before island (+ answer) or (- answer) equals number after the island landed upon. Game is over when all treasure is collected.
