PRIMARY MATH SERIES

200BK

 This primary level tutorial math series is designed to help young children learn single and double digit addition and subtraction through the use of oversize numbers and graphics. Addition 1 and Subtraction 1 teach single digit math processes, while Addition 2 and Subtraction 2 demonstrate double digit math with carrying and borrowing. A choice of two levels is offered for each program.

 Level 1 presents random problems with a graphic representation of the math process involved. Graphic aids represent the number of units in each number, then demonstrate the math process involved. The student must enter the correct answer and press RETURN. Level 2 is similar to Level 1 but without the graphic presentation of the numbers. This level is primarily for drill and practice.

 A performance summary is displayed after each ten problems.
